Global Drive
*Servo motors
MDXK / MDFQA
synchronous / asynchronous*

Servo motors

In the Global Drive System, asynchronous and synchronous motors perfectly match the controllers. Thanks to modular design and the planned options it is possible to select a suitable drive. Further assets of Global Drive servo motors are: small size, long life and high operational safety.

Comfortable system cables with plug-in connectors enable easy connection. Modern production processes ensure a good price / performance ratio.
This catalogue describes all preference types which are available within 15 working days as well as all industry types which require a delivery time of 30 working days.
We would like to present further options of this modular design personally.

Lenze worldwide

Lenze

Today, servo drive systems must fulfil highest demands. With Global Drive, Lenze succeeded in combining different drive components to form a perfectly matching system. The programme of servo motors for the power range up to 60.1 kW is completed by brushless synchronous servo motors for the lower power range from 0.25 to 4.2 kW. Compared with standard three-phase AC motors, these servo motors provide a very low moment of inertia, low weight, high maximum speed and a wide speed-setting range.

High dynamic response and accuracy

Servo motors provide a low moment of inertia and a high overloadability. Optimum temperature-independent control features are achieved by continuously measuring the temperature with an integrated temperature sensor. Together with servo inverters of series 9300, the motors ensure high speed accuracy, best concentricity and high angle acceleration.

Long service life

The high quality standard, Lenze sets for all components, meets the requirements of modern drive technology for operational safety and service life.
A reinforced isolation with thermal reserve (coated wire to thermal class H, class F temperature rise) ensures a long service life of the winding.
Prestressed rolling bearings with high temperature resistant lubrication ensure a long service life.

Operational safety

Enclosure IP54 of MDXK motors ensures good protection against dust and water ingress. MDFQA motors up to 60.1 kW are protected by enclosure IP23.

CE conformity

Of course, Lenze servo motors MDXK and MDFQA comply with the EC Directives:
– CE conformity to the Low Voltage Directive
– CE conformity to the Electromagnetic Compatibility of a typical drive configuration with inverter.
The electromagnetic compatibility can be easily guaranteed by using predetermined system cables.

No compromises with the output speed

The wide ratio range of gearboxes combined with the small ratio step of 1.12 enables the exact selection of the output speed range required.

Compact

The high power density of the motors facilitates small drive units.
Especially compact drives are formed by using geared servo motors with directly connected motors.

Adaptability

The modular motor design and the number of planned variants facilitate the selection of the motor for your application.
Thanks to the variety of output designs of motors and geared motors, the drives fulfil many application requirements:
– Servo motors with cylindrical shaft end with or without key
– Servo motors with flanges provided with through hole bores for mounting position B5, with threaded bores for mounting position B14.
– Geared servo motors with solid shaft, hollow shaft or hollow shaft with shrink disc.
– Geared servo motors with or without flange, foot or centring
– Different integrated angle encoders ensure the accuracy required:
  Resolver as standard solution, optimised characteristic because of internal improvement of the resolver accuracy. SinCos absolute value encoder as industry type for highest accuracy. Incremental encoder with 2048 pulses as preference type for MDFQA and as industry type for MDXK.

Low noise

High chopper frequency of the inverters (up to 16 kHz) result in a low noise generation.
In addition, optimised toothing geometry and internally ribbed cast iron housings of Lenze Gearboxes reduce the noise generated.

Reduced backlash

The application of backlash-free permanent magnet holding brakes enables a defined holding of a position even when no voltage is applied.
Compared with other gearboxes, backlash-free connection elements of Lenze Gearboxes and the high splining quality achieved by precise production ensure a low backlash at the output of geared servo motors.
Special types

Special applications require special motor designs. Possible options are e.g.:
– incremental encoder as feedback with 4096 pulses
– second feedback.

We are prepared to give more detailed information.

Brake

The servo motors MDXKX can be equipped with integrated permanent magnet holding brakes for 24 V DC (industrial type 205 V).
The enclosed ventilated asynchronous servo motors MDFQA can be equipped with a 205 V or 24 V spring operated brake.

The brakes are active after switching off the power supply (normally on principle).
When using the brakes for holding applications only, the friction linings are virtually resistant to wear. If the permissible friction work is not exceeded, at least 150 emergency stop operations are possible.

The employed brakes are no safety brakes in the real sense of the word, i.e. in case of disruption by not influencable factors, like penetration of oil or failure of the A-side shaft seal, a reduction of torque may occur.

[1]) Engagement time for DC switching, for AC switching t_{is} prolonged by approx. factor 4
[2]) Max. friction work per switching operation with n = 1500 min-1
[3]) Transference operating frequency to VDI 2241 to detect the permissible operating frequency or friction work

With long motor cables and especially with 24V brakes, the ohmic voltage drop along the cable must be observed and compensated by a higher voltage input – otherwise, the voltage applied to the brake will not be high enough (24V or 205V).

For Lenze system cables the following applies:

$$\Delta V_B = 0.08 \cdot I_{cable} \, [m] \cdot I_B \, [A]$$

If the voltage applied to the brake is not correct (too high, too low, wrong polarity), the brake is activated immediately and can be overheated and destroyed by the still rotating motor.
Shortest switching times of the brake can be reached by DC switching of the voltage. A spark suppresser avoids voltage peaks.

Asynchronous servo motor MDXQA (enclosed ventilated)	●	●	●	●
Designation	RS	IT2048	AS512	AM512
Type		ITD21	SCS70	SCM70
Signals		2048 bars TTL signals	512 periods, sine signals 1 Vss asynchronous half-duplex interface RS485 for transmission of the absolute position	
Resolution	0.8'	2.6'	0.4'	0.4'
Accuracy	+- 10' bzw. +- 4' when entering the correction code	+- 2' depending on no. of bars	+- 0.8'	+- 0.8'
Absolute positioning	1 revolution	no	1 revolution	4096 rev.
Note	**Standard solution** for most applications	Incremental encoder instead of resolver	Sin-Cos encoder instead of resolver current position via interface of the 9300. Operation only possible after encoder selection at 9300 (encoder type and voltage supply), values saves, and unit switched off and on again.	

Resolver (built-in encoder)

Stator-fed resolver with 2 stator windings turned by 90°
and a rotor winding with transformer winding.

Design	Brushless hollow shaft resolver in pancake-design
Max. speed (permanent)	8000 min^{-1}
Max. speed (short time)	10000 min^{-1}
Input voltage	10 V amplitude
Input frequency	4 kHz
Ratio stator / rotor	0.3 ± 5 %
Rotor impedance Zro	51Ω + j90 Ω
Stator impedance Zs0	102 Ω + j150 Ω
Impedance Zrs	44 Ω + j76 Ω
Insulation resistance	> 10 MΩ with 500 V DC
No. of pole pairs	1
Max. phase error	± 10 angular minutes

Lenze
Sin-Cos absolute value encoder (built-in encoder)

Absolute value encoder with 2 sine-wave signals displaced by 90° with 512 periods per revolution and serial interface RS 485 for the transmission of parameters and the absolute position within one or 4096 revolutions.

Type	SCS 70
Design	Brushless hollow shaft encoder
Maximum torque	12000 min^{-1}
No. of revolutions absolutely resolved	1 (single turn)
No. of periods	512 periods / rev.
Output signals	2 sine-wave signals displaced by 90° with 1 V_{SS}, serial interface RS 485, asynchronous, half duplex
Limit frequency	100 kHz
Voltage supply	7 ... 12 V
Current consumption	100 ... 130 mA

Type	SCM 70
Design	Brushless hollow shaft encoder
Maximum torque	12000 min^{-1}
No. of revolutions absolutely resolved	4096 (multi turn)
No. of periods	512 periods / rev.
Output signals	2 sine-wave signals displaced by 90° with 1 V_{SS}, serial interface RS 485, asynchronous, half duplex
Limit frequency	100 kHz
Versorgung	7 ... 12 V
Current consumption	100 ... 130 mA

Incremental encoder (built-in encoder)

Encoder with 2 TTL square-wave signals displaced by 90° with 2048 pulses per revolution and additional zero track.

This encoder is optionally available as preference feedback to the resolver for motor series MDFQA.

| Type	ITD 21
Design	Brushless hollow shaft encoder
Maximum torque	8000 min^{-1}
No. of pulses	2048 pulses / rev.
Output signals	2 square-wave signals displaced by 90°, zero pulse, complementary TTL signals, $V_{low} \leq 0.5$ V, $V_{high}, \geq 2.5$ V
Voltage supply	5 V ± 5 %, protect against polarity reversal
Current consumption	≤ 150 mA
Limit frequency	300 kHz

Lenze
Temperature sensor KTY 83-110 (integrated)

The KTY temperature sensor continuously measures the motor temperature. It represents, though, no complete protection. The signals are fed back to the servo inverter 9300 via the system feedback cable. When feeding the encoder with a measuring current of 1 mA, temperature and resistance show the following characteristic:

Temperature sensor
Temperature switch – normally closed contact

As alternative to the continuous sensor KTY, with the MDFQA it is also possible to use a temperature contact to monitor the windings.

Asynchronous motors of the series MDFQA are equipped with both temperature monitoring.

Basic data

When installing a servo drive, normally a dynamic operation is required.

The essential data for the appropriate size of the motor are the following:

- Maximum torque M_{max}, Maximum speed n_{max}, efficient torque M_{eff} and if necessary transmission i

a) Transmission:
  – for **perfect dynamic response**

b) – for a good use while **continuous operation**

$$i \approx \sqrt{\frac{J_{load}}{J_{motor}}}$$

$$i \approx \frac{n_{rated}}{n_{load}}$$

Efficient torque:

$$M_{rms} = \sqrt{\frac{1}{T} \sum_i M_i^2 \, t_i}$$

Maximum torque:

$$M_{max} = M_{accel} + \frac{1}{i} \frac{1}{\eta_{gearbox}} M_{load}$$

$$M_{accel} = 2 \cdot \pi \frac{\Delta n}{\Delta t} \left(J_{motor} + \frac{1}{i^2} J_{load} \right)$$

Selection of the motor

After having detected the technical data one may choose between synchronous and asynchronous motors, on the one hand and, on the other hand, between self ventilated and forced ventilated motors. The main characteristics of the different motor types are listed below:

Select motor according to $M_{rated} > M_{rms}$ and $n_{max} > M_{max}$ and take into consideration:

– **no stream** of air allowed	→	Motor without fan MDSK
– **fluffs** or something similar, that might block the air channels	→	Motor without fan MDSK
– **high enclosure** required	→	Motor without fan MDSK
– **high dynamic response** required	→	Motor with fan MDFK,
	→	Synchr. servo motor MDXKS
– operation with **constant power** with high speed (operation with weak field)	→	Asynchr. servo motor MDXKA
– very high **power density**	→	Synchr. servo motor MDXKS
	→	enclosed ventilated asynchr. motors MDFQA
– **parallel operation** of servo mot. with one single inverter	→	Asynchr. servo motor MDXKA, MDFQA

Lenze
Operational mode: acceleration

Selecting the size of the drives according to the limit characteristics.

If you select the drive according to n_{max} and M_{max}, the following has to be taken into account:

– Low noise $\rightarrow$ selection of 16 kHz chopp. fre.

– Check permanent current $\rightarrow$ especially with accelerating drive
($I_{max} > 1.5\ I_{rated\ inverter}$)

$$I_{perm} > I_{medium} = \frac{1}{T_i}\ \Sigma\ I_{rated\ motor} \cdot \frac{M_i}{M_{rated}} \cdot t_i$$
with synchr. motors

The mean is always below net value.

In the case of the continuous operation S6 and $M_{efficient} < M_{rated}$ the current medium value Imedium is smaller than the permanent current of the installation.

The following data are important for the operational mode acceleration drive:

Permanent current $\approx 0.7 \cdot I_{rated\ inverter}$

Maximum current $\approx 2 \cdot I_{rated\ inverter}$

EC-Declaration of Conformity '96
for the purpose of the
EC Low-Voltage Directive (73/23/EEC)
amended by: CE- mark directive (93/68/EEC)

The following products were developed, designed, and manufactured in
compliance with the above-mentioned EC directive under the sole responsibility of
Lenze GmbH & Co KG, Postfach 10 13 52, D-31763 Hameln

Product:	**Type:**
DC motors	MGFRK, MGFQU, MGFQK MGERK, MGEQU, MGEQK MGSRK, MGSQU, MGSQK 13.12o , 13.53o , 13.55o 43.55o
Asynchronous motors	13.71o , 13.74o , 13.75o 13.81o , 13.84o , 13.85o DFRA, DERA, DSRA 43.71o , 43.75o
Servo motors	DFVA, DSVA, MDFQA MDFKA, MDSKA MDFKS, MDSKS
Three-phase AC winder motors	o oL12, o oF12 o oS8, o oS6 o oS4, o oF4 o oMF4, o oSF4 o oLF4

Standards:
EN 60204-1, IEC 204-1
EN 60034, VDE 0530, IEC34

Declaration about EMC directive (89/336/EEC)
Asynchronous motors comply with the requirements of the EC directive „Electromagnetic Compatibility" 89/336/EEC under
consideration of the standards EN 80081-1 and EN 50082-2 when connected to a sinusoidal AC mains voltage.

For inverter or DC-controller operation, the EMC notes of the manufacturers must be observed.
When using screened motor cables, the screening is most effective with a conductive connection with as large an area as
possible between the screen and the earth potential of the motor (e.g. metal cable gland).

Hamel, February 20, 1996
