

Main applications

- Packaging Machinery
- Thermoforming
- Plastic extrusion lines
- Industrial ovens and furnaces
- Control application with high switching speed

Main features

- Alternating current solid state relay
- Zero crossing switching
- Copper/semiconductor coupling technology
- 15, 25, 50 and 90Arms nominal current
- Non-repetitive voltage: up to 1600Vp
- Nominal Voltage: up to 600 Vac
- Control voltage : 3...32Vcc and 20...260Vac/Vcc with connector
- Isolation ((input-output) 4000Vrms
- Red LED drive active signal
- Internal MOV (option)

PROFILE

Zero crossing relay with antiparallel thyristor output is the most used solid state relay in industrial applications. In fact, it can be used for resistive, inductive and capacity loads. "Zero crossing" relay is energised when voltage meets the zero point and disenergised when current meets the zero point, depending on the signal control on the input circuit. This relay has been designed to stand high-value transitory applications. When the relay has to stand high currents for a long period, it is necessary to grant a proper dissipation and an adequate electrical connection between relay terminals and the load. Varistors, fuses, thermostats and fans are available as fittings. Use the relay with an opportune heatsink (see section accessories).

TECHNICAL DATA

General features

Rated frequency: 45...65Hz
 Activation time:
 GQ...-D- ≤1/2 cycle GQ...-A- ≤1 cycle
 Deactivation time:
 GQ...-D- ≤1/2 cycle GQ...-A- ≤1 cycle
 Power factor: ≥0,5
 Protection level: IP20

- $U_{imp} = 4,8KV$
- $U_i = 660V$
- Overload current profile = 10
- Conditional short circuit current = 5KA with type 1 coordination and respective fuse protections.

GQ15/25 fuse type aM6A
 GQ50 fuse type aM16A
 GQ90 fuse type aM20A

GQ...- 24-

Nominal voltage: 24...230 Vac
 (max range 20...253Vac)
 Non-repetitive voltage: ≥ 600 Vp
 Zero switching voltage: ≤ 20V

Solid State Relay Dissipated Power Calculation

Single phase state relay
 P_d GQ .. 15/25 = 1,45 . Irms [W]
 P_d GQ .. 50/90 = 1,35 . Irms [W]
 P_d GQ .. 50B = 1,2 . Irms [W]
 I_{RMS} = single-phase load current

Heatsink Thermal Resistance Calculation

$R_{th} = (90^\circ\text{C} - T_{amb. max}) / P_d$
 where P_d = dissipated power
 Max. amb. T = max air temperature inside the electrical cabinet.
 Use a heatsink with thermal resistance inferior

DIMENSIONS

Dimensions in mm, (inc)

(*) See installation notes

to the calculated one (Rth).

Installation notes

The device must be protected by a high speed fuse (accessory).

Applications with power solid state relays must also have a switch to isolate the power line.

Protect the solid state relay against overheating by using a heatsink (accessory).

The heatsink must be sized according to room temperature and load current (see technical data).

Heatsink installation procedure:

spread 1 gram of thermoconductive silicone paste (we recommend DOW CORNING 340) on the dissipative metal surfaces of the module.

The surfaces must be clean and the thermoconductive paste must not contain any impurities. As alternative it is also possible to use the slide SIL-GQ available as accessory.

Alternately tighten the two fastening screws until reaching a torque of 0.4...0.6 Nm.

Wait 5 minutes for any excess paste to run off.

Alternately tighten the two fastening screws until reaching a torque of 1.2...1.4 Nm.

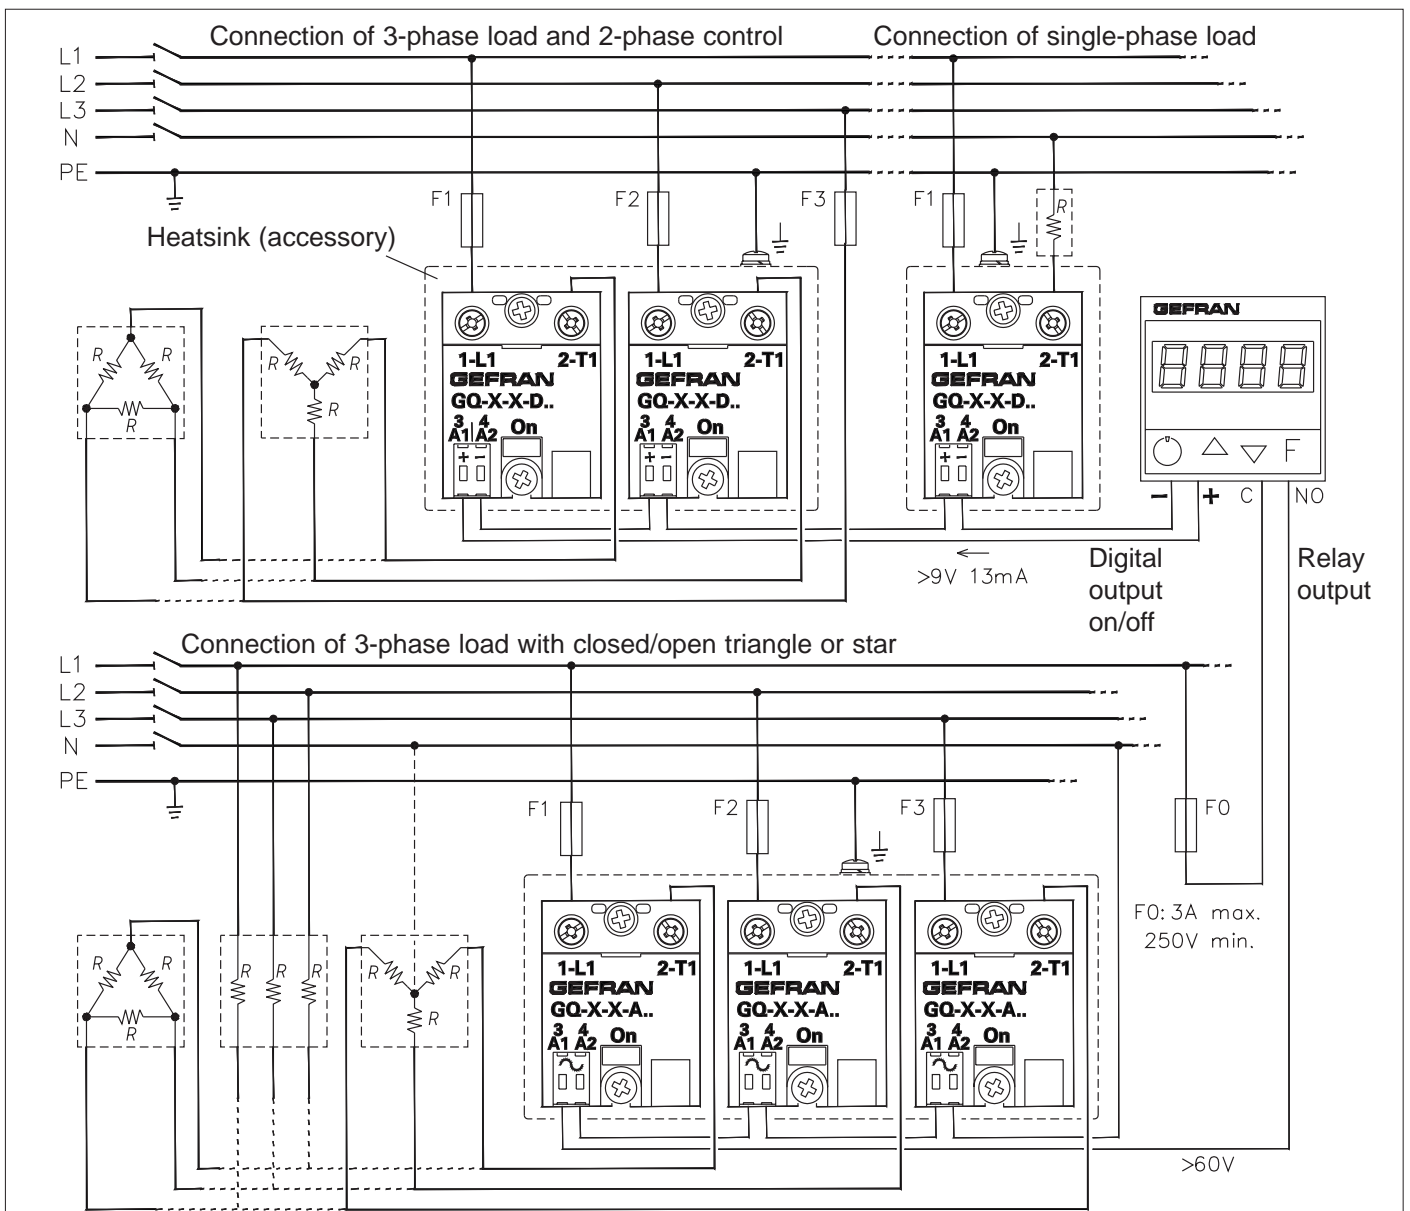

Attention

The contact surface of the heatsink module may have a maximum planarity error of 0.1 mm and maximum roughness of 0.02 mm.

The fastening holes on the heatsink must be threaded and countersunk.

The heatsink must be grounded.

•WARNINGS

WARNING: this symbol indicates danger.

Before installation, please read the following advices:

- follow the indications of the manual scrupulously when making the connections to the instrument.
- use a cable that is suitable for the ratings of voltage and current indicated in the technical specifications.
- if the instrument is used in applications where there is risk of injury to persons and damage to machines or materials, it is essential that it is used with an auxiliary alarm device.

It is advisable to verify frequently that the alarm device is functional even during the normal operation of the equipment.

- The instrument must NOT be used in environments where there could be the presence of dangerous atmospheres (inflammable or explosive).
- During continuous operation, the heatsink may reach 100°C and remain at a high temperature due to thermal inertia even after the device is switched off. Therefore, DO NOT touch the heat sink or the electrical wires.
- do not operate on the power circuit unless the main supply is disconnected.
- DO NOT open the cover if device is "ON"!

(use the holes in the cover for eventual re-calibration).

Installation:

- connect the device to the ground using the proper ground terminal.
- the power supply wiring must be kept separate from that of inputs and outputs of the instrument; always check that the supply voltage corresponds to that indicated on the instrument cover.
- evitare la polvere, l'umidità, i gas corrosivi, le fonti di calore.
- keep away from dust, humidity, corrosive gases and heat sources.
- The connection cable must be shorter than 3 meters if the current transformer is used.

Maintenance: Check the correct operation of the cooling fans at regular intervals; clean the ventilation air filters of the installation at regular intervals.

- Repairs must be performed only by specialized or appropriately trained personnel. Cut off power to the device before accessing internal parts.
- Do not clean the box with solvents derived from hydrocarbons (trichloroethylene, gasoline, etc.). Using such solvents will compromise the mechanical reliability of the device. To clean external plastic parts, use a clean cloth wet with ethyl alcohol or water.

Technical service : GEFRAN has a technical service department. Defects caused by use not conforming to the instructions are excluded from the warranty.

In conformity to ECC 2004/108/CE and 2006/95/CE and following modification with reference to standard EN 60947-4-2 (Low voltage equipment - AC Semiconductor starters and contactors)
